This project is the collaborative effort of the 30 research teams involving 34 different research organizations, as well as the National Conference of Black Political Scientists (NCOBPS). Individual teams had their own principal investigators and research groups and designed their own team surveys. The teams and their Principal Investigators are:

Team	Principal Investigator
AEI/Brookings	Thomas Mann
Akron	John Green
BYU	Chris Karpowitz
Caltech	Michael Alvarez
American (CCPS)	Brian Schaffner
Dartmouth	Michael Herron
Duke	John Aldrich
Duke 2	David Sparks
Florida State	Cheri Maestas
Fordham	Jeff Cohen
George Washington	John Sides
Harvard/MIT	Stephen Ansolabehere
Indiana	Ted Carmines
Maryland	James Gimpel
UMBC/NCOBPS	Tyson King-Meadows
Missouri	David Konisky
NYU/Berkeley	Patrick Egan
Ohio State	Ismail White

Stephen Ansolabehere served as the Principal Investigator for the overall project and Emily Ware at Harvard served as the Project Administrator. All teams contributed to the Common Content; Stephen Ansolabehere coordinated the development of the Common Content questionnaire. Sam Luks at YouGov/Polimetrix was the Project Manager at YouGov/Polimetrix. Doug Rivers at YouGov/Polimetrix

CCES 2010 Guide

provided general guidance for the sample design. Special thanks to Anna Razdolskiy, Brooke Turner, Marissa Shih, Aaron Abood, Katie Rigney, Jason Cowden, Chris Perry, and Jeff Stewart for their work organizing, preparing, and processing the team surveys, and to Chris Mulligan and Justin Hill for sample management.

The Department of Political Science at MIT, especially Charles Stewart, and the Dean of the School of Humanities and Social Sciences at MIT and the Dean of the Faculty of Arts and Sciences at Harvard provided essential research support for this project, as did each of the universities and research organizations sponsoring a team.

Referencing the Study

For research that uses the Common Content, the reference follows the ICPSR protocol:

Ansolabehere, Stephen, COOPERATIVE CONGRESSIONAL ELECTION STUDY, 2010: COMMON CONTENT. [Computer File] Release 1: February 26, 2012. Cambridge, MA: Harvard University [producer] <http://cces.gov.harvard.edu>

As individual teams use their datasets for publication and make their datasets available, referencing the team content will follow the same protocol:

[Name of Team Principal Investigator], COOPERATIVE CONGRESSIONAL ELECTION STUDY, 2010: [TEAM NAME] CONTENT. [Computer File] Release: [Date]. [Location of Team]. [producer] <http://cces.gov.harvard.edu>

Part I

INTRODUCTION

The Cooperative Congressional Election Study, or CCES, seeks to study how Americans view Congress and hold their representatives accountable during elections, how they voted and their electoral experiences, and how their behavior and experiences vary with political geography and social context. This study constructed a very large sample capable of capturing variation across a wide variety of legislative constituencies. In fact, the state-level samples are sufficiently large as to measure with a reasonable degree of precision the distribution of voters' preferences within most states.

The 2010 CCES involved 30 teams, yielding a Common Content sample of 55,400 cases. The subjects for this study were recruited during the fall of 2010. Each research team purchased a 1,000 person national sample survey, conducted in October and November of 2010 by YouGov/Polimetrix of Palo Alto, CA. Each survey has approximately 120 questions. For each survey of 1,000 persons, half of the questionnaire was developed and controlled entirely by each the individual research team, and half of the questionnaire is devoted to Common Content. The Common Content consists of the questions common to all team modules and has a sample size equal to the total sample size of all team modules combined. Most of the 30 teams purchased 1,000 person surveys, though the Harvard/MIT team purchased additional cases to increase their sample size and the size of the Common Content. All cases were selected through the Internet and YouGov/Polimetrix constructed matched random samples for this study.

Interviews for the 2010 survey were conducted in two waves. The Pre-Election wave was conducted during October, 2010, and gauged issue preferences, knowledge of the candidates, some demographics, and vote intentions. The Post-Election wave was conducted the two weeks following Election Day (November 2, 2010). Data Release 1 occurred on February 26, 2012, and corresponds to the file `CCES_2010_CommonContent`.

The 2010 CCES is part of an on-going study. The Cooperative Congressional Election Study formed in 2006 to study congressional elections and representation using very large scale national surveys, building off of the 2005 MIT Public Opinion Research and Training Lab (PORTL) study. Thirty-six separate teams joined the consortium for the 2006 study. The 2006 Common Content amounted to a 36,500 person survey that allowed the collaborative to measure the distribution of political attitudes and preferences within states and congressional districts. A smaller group assembled to conduct a 10,000 person survey in 2007, and was conducted during the last two weeks of November, 2007. The 2007 study consisted of reinterviews of subjects from the 2006 study. In 2008, the collaborative again conducted a large-scale study with 32,800 cases. A separate, 2,000 respondent panel study was conducted by Stephen Ansolabehere, and consisted of interviews of the same people in 2006, 2007, and 2008. The 2009 off-year study employed a smaller, 13,800 respondent sample.

This guide describes the methodology behind the overall study and the measures and variables developed for the Common Content of the 2010 study. There are five parts to the 2010 CCES Common Content – sample identifiers (including state and congressional district), profile questions (largely

CCES 2010 Guide

demographic), pre-election questions, post-election questions, and contextual data (including candidate names and parties, election results, and roll call votes). This codebook provides question wordings, values, and frequencies presented of the variables for the 2010 Common Content dataset. Each Team Module has its own dataset and codebook, distributed by the team at its discretion. However, in the spirit of openness it is strongly recommended that all teams make their data available to the public for free.

The criteria for inclusion of a question in the Common Content were three-fold. First, what questions would naturally be of interest to scholars researching Congress, representation, and elections? Items such as approval of Congress, approval of the individual Senator or House Member, Partisanship, Ideology, views on the economy and war, and Voting Behavior, as well as demographic characteristics of voters fall into this category. Second, what questions did a large number of teams want to include in the study? For example, a number of research teams expressed interests in studying roll call voting behavior of members of Congress. Another cluster of teams wanted a more extensive battery of questions of religion, which led the CCES to expand beyond the usual questions asked by the ANES. Third, what phenomena can only be measured with a large survey? The very large sample for the Common Content provides the opportunity to study legislative constituencies – states and congressional districts – as well as voters within those constituencies, to study very rare or low frequency events or very small populations, and to measure with fairly high accuracy interactions. An example of content included in the common for this reason is the battery of questions on problems encountered when voting. Such problems occur at the frequency of about 2 or 3 percent, are enough to present voting rights issues, but too small to be measured in standard surveys.

Each individual research group also produced their own Team Content. That content was controlled by the specific group and is distributed through that group. Some of the individual teams distribute their 1,000 respondent surveys through the CCES collaborative. Separate codebooks and databases are prepared by the individual teams.

Part II

SAMPLING METHODOLOGY

The 2010 CCES survey was conducted over the Internet by YouGov/Polimetrix. The Common Content was asked of 55,400 adults interviewed in October 2010 (for pre-election data), and in November 2010 (for post-election data). The sampling method uses YouGov/Polimetrix's matched random sample methodology. A Pew-sponsored research project run by the Caltech/MIT Voting Technology Project conducted a split sample study contrasting this methodology with random digit dialing phone methods during the 2008 general election. Interested researchers are encouraged to contact Charles Stewart at MIT for further details on that comparison of sampling methodologies. Overall, the differences between the two sorts of samples were slight.

Sampling and Sample Matching

Sample matching is a methodology for selection of “representative” samples from non-randomly selected pools of respondents. It is ideally suited for Web access panels, but could also be used for other types of surveys, such as phone surveys. Sample matching starts with an enumeration of the *target population*. For general population studies, the target population is all adults, and can be enumerated through the use of the decennial Census or a high quality survey, such as the American Community Survey. In other contexts, this is known as the *sampling frame*, though, unlike conventional sampling, the sample is *not* drawn from the frame. Traditional sampling, then, selects individuals from the sampling frame at random for participation in the study. This may not be feasible or economical as the contact information, especially email addresses, is not available for all individuals in the frame and refusals to participate increase the costs of sampling in this way.

Sample selection using the matching methodology is a two-stage process. First, a random sample is drawn from the target population. We call this sample the *target sample*. Details on how the target sample is drawn are provided below, but the essential idea is that this sample is a true probability sample and thus representative of the frame from which it was drawn.

Second, for each member of the target sample, we select one or more *matching* members from our pool of opt-in respondents. This is called the *matched sample*. Matching is accomplished using a large set of variables that are available in consumer and voter databases for both the target population and the opt-in panel.

The purpose of matching is to find an available respondent who is as similar as possible to the selected member of the target sample. The result is a sample of respondents who have the same measured characteristics as the target sample. Under certain conditions, described below, the matched sample will have similar properties to a true random sample. That is, the matched sample mimics the characteristics of the target sample. It is, as far as we can tell, “representative” of the target population (because it is similar to the target sample).

When choosing the matched sample, it is necessary to find the closest matching respondent in the panel of opt-ins to each member of the target sample. Various types of matching could be employed: exact matching, propensity score matching, and proximity matching. Exact matching is impossible if the set of characteristics used for matching is large and, even for a small set of characteristics, requires a very large panel (to find an exact match). Propensity score matching has the disadvantage of requiring estimation of the propensity score. Either a propensity score needs to be estimated for each individual study, so the procedure is automatic, or a single propensity score must be estimated for all studies. If large numbers of variables are used the estimated propensity scores can become unstable and lead to poor samples.

YouGov/Polimetrix employs the proximity matching method. For each variable used for matching, we define a *distance function*, $d(x,y)$, which describes how “close” the values x and y are on a particular attribute. The overall distance between a member of the target sample and a member of the panel is a weighted sum of the individual distance functions on each attribute. The weights can be adjusted for each study based upon which variables are thought to be important for that study, though, for the most part, we have not found the matching procedure to be sensitive to small adjustments of the weights. A large weight, on the other hand, forces the algorithm toward an exact match on that dimension.

Theoretical Background for Sample Matching

To understand better the sample matching methodology, it may be helpful to think of the target sample as a simple random sample (SRS) from the target population. The SRS yields unbiased estimates because the selection mechanism is unrelated to particular characteristics of the population. The efficiency of the SRS can be improved by using stratified sampling in place of simple random sampling. SRS is generally less efficient than stratified sampling because the size of population subgroups varies in the target sample.

Stratified random sampling partitions the population into a set of categories that are believed to be more homogeneous than the overall population, called *strata*. For example, we might divide the population into race, age, and gender categories. The cross-classification of these three attributes divides the overall population into a set of mutually exclusive and exhaustive groups or strata. Then an SRS is drawn from each category and the combined set of respondents constitutes a stratified sample. If the number of respondents selected in each strata is proportional to their frequency in the target population, then the sample is self-representing and requires no additional weighting.

The intuition behind sample matching is analogous to stratified sampling: if respondents who are similar on a large number of characteristics tend to be similar on other items for which we lack data, then substituting one for the other should have little impact upon the sample. This intuition can be made rigorous under certain assumptions.

Assumption 1: Ignorability. Panel participation is assumed to be *ignorable* with respect to the variables measured by survey conditional upon the variables used for matching. What this means is that if we examined panel participants and non-participants who have exactly the same values of the matching variables, then on average there would be no difference between how these sets of respondents answered

the survey. This does *not* imply that panel participants and non-participants are identical, but only that the differences are captured by the variables used for matching. Since the set of data used for matching is quite extensive, this is, in most cases, a plausible assumption.

Assumption 2: Smoothness. The expected value of the survey items given the variables used for matching is a “smooth” function. Smoothness is a technical term meaning that the function is continuously differentiable with bounded first derivative. In practice, this means that the expected value function doesn’t have any kinks or jumps.

Assumption 3: Common Support. The variables used for matching need to have a distribution that covers the same range of values for panelists and non-panelists. More precisely, the probability distribution of the matching variables must be bounded away from zero for panelists on the range of values (known as the “support”) taken by the non-panelists. In practice, this excludes attempts to match on variables for which there are no possible matches within the panel. For instance, it would be impossible to match on computer usage because there are no panelists without some experience using computers.

Under Assumptions 1-3, it can be shown that if the panel is sufficiently large, then the matched sample provides consistent estimates for survey measurements. The sampling variances will depend upon how close the matches are if the number of variables used for matching is large. In this study, over 150,000 respondents to PollingPoint Internet surveys were used for the pool from which to construct the matches for the final sample.

Sampling Frame and Target Sample

YouGov/Polimetrix constructed a sampling frame of U.S. Citizens from the 2008 American Community Survey, including data on age, race, gender, education, marital status, number of children under 18, family income, employment status, citizenship, state, and metropolitan area. The frame was constructed by stratified sampling from the full 2008 ACS sample with selection within strata by weighted sampling with replacements (using the person weights on the public use file). Data on reported 2008 voter registration and turnout from the November 2008 Current Population Survey was matched to this frame using a weighted Euclidean distance metric. Data on religion, church attendance, born again or evangelical status, news interest, party identification and ideology was matched from the 2007 Pew U.S. Religious Landscape Survey. The target sample was selected by stratification by age, race, gender, education, and by simple random sampling within strata.

Stratification and Matching

The sample drawn for the CCES were chosen from the YouGov/Polimetrix PollingPoint Panel and the E-Rewards and Western Wats panels using a five-way cross-classification (age x gender x race x education x state). All respondents who completed the pre-election survey were re-invited to the post-election survey. The final set of completed pre-election interviews were then matched to the target frame, using a weighted Euclidean distances metric.

CCES 2010 Guide

The following distance function was used for the match:

```
fmatch <- function(target, pool) {  
  1.5*(abs(target$gender - pool$gender)) +  
  (abs(target$age - pool$age)/30) +  
  0.5*(target$age3b - pool$age3b) +  
  10*(target$race4 != pool$race4) +  
  (target$region != pool$region) +  
  (abs(target$educyrs - pool$educyrs)/6) +  
  0.5 * (target$newsint != pool$newsint) +  
  (mat.marstat5.marstat5[target$marstat5,pool$marstat5]/4) +  
  1.5 *(target$pid5 != pool$pid5) +  
  (target$ideo5x != pool$ideo5x) +  
  (target$majrelg != pool$majrelg)/2 +  
  (mat.churatd.churatd[target$churatd8,pool$churatd8]/10) +  
  (mat.income.income[target$income,pool$income]/15) +  
  4*(mat.votereg.votereg[target$votereg,pool$votereg]) +  
  (mat.cbsa3.cbsa3[target$cbsa3,pool$cbsa3]/2)  
}
```

Where the matching variables were:

- Gender: respondent's gender
- Age: respondent's age in years
- Age3b: categorical age variable with categories 18-29, 30-64, and 65+
- Race4: categorical race variable with categories white, black, Hispanic/Latino, and other
- Region: Census region
- Educyrs: years of education
- Newsint: interest in politics
- Marstat5: marital status
- Pid5: party identification with categories, Democrat, Independent leaning Democrat, Independent, Independent leaning Republican, Republican, and other
- Ideo5x: 5-point ideology
- Majrelg: Pew religion recoded into the following categories: evangelical protestants, mainline protestants, black protestants, Catholics, other Christians, other faiths, and unaffiliated
- Churatd: 6-point church attendance
- Income: household/family income
- Votereg: voter registration status
- Cbsa3: metropolitan statistical area (metro or non-metro)

For unordered variables, matrices of distances were used, as indicated above.

Weighting

The matched cases were then weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, years of education, gender, and turnout. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles. The final weights were then post-stratified by gender, race, education, and age. Weights larger than 7 were trimmed and the final weights normalized to equal sample size.

By sample matching on registered and unregistered voters we can create a nationally representative sample of US adults using appropriate sample weights. Approximately three fourths of US adults are registered to vote. In midterm elections approximately half of registered adults vote. Surveys tend to experience over reporting of voting behavior. The American National Election Study surveys for 2004 and 2002 report that approximately 78.5% of respondents said they voted in the 2004 general election, and 71.5% said they voted in the 2002 midterm election. Actual turnout numbers were in the range of 53% in 2004 and 42% in 2002. In the 2010 CCES 62.6% report voting (after weighting and accounting for non-voter dropoff between waves) and 87.0% report being registered to vote in the pre-election survey.

Validation

The very large sample of the CCES provides a way to validate the sampling by comparing the state level samples within the survey with the actual election results.

2005. Polimetrix performed a similar analysis during the 2005 California special election, at which Californians voted on seven Propositions, put on the ballot by Governor Schwarzenegger as part of his reform efforts. The survey firm had conducted several polls over the course of the campaign. The final surveys from the firm for each of the Propositions serve as a prediction of the ultimate division of the vote. The root mean square error was 3.0%, slightly higher than one would expect from simple random sampling, and the average error (bias) was 1.5%, a slight but insignificant overstatement of the Yes vote. The results are shown in Table 1 below.

Table 1: Survey Accuracy in 2005 California Special Election, Polimetrix Final Survey Election Outcome

<i>Proposition</i>	<i>Yes</i>	<i>No</i>	<i>Undec.</i>	<i>Outcome</i>	<i>Error</i>
73	43%	54%	2%	47.4%	-3.1%
74	45%	52%	3%	45.1%	1.3%
75	48%	49%	3%	46.7%	2.8%
76	40%	56%	3%	38.0%	3.7%
77	41%	52%	6%	40.6%	3.5%
78	33%	55%	13%	41.5%	-4.0%

CCES 2010 Guide

79 38% 46% 16% 39.0% 6.2%

2006. Comparison of the 2006 CCES with actual election results provides internal checks on the quality of the sample and responses. Specifically, we can aggregate (using the weights – v1001 in the 2006 study) to the state level questions on vote for Governor (2006 v4013), U.S. Senator (2006 v4014), and other statewide offices (2006 v4016-v4019). The difference between the Democratic Percent of the Two Party vote for each office in the sample and the actual results measures the error. That error is due to sampling and to bias. The simple difference is the Democratic party bias, the squared error is the mean squared error, and the square root of the MSE is a measure of the standard error. The average (across states) MSE, Root MSE, and Democratic Bias for each office are shown in Table 2. The overall relationship between Democratic Share of the Actual Vote and Democratic Share of the Survey Reported Vote is shown in the Figure.

The sample bias for vote choice is quite small. The average error across all offices equals 0.3 %. For some offices, there is a small Democratic bias, for others there is a small Republican bias. The largest bias occurs with Lieutenant Governors, where the survey overstated the Democratic vote share on average 2.4%.

Table 2: Survey Accuracy in 2006 CCES Sample for U. S. Senators, Governors, and Other Statewide Offices, in states with at least 200 cases.

Office	Avg. Error (Democratic Bias)	Root MSE (St. Error)	Average Freq. (N of Responses)	Expected St. Error (Avg. Sample)
Governor	-0.04%	2.24%	604	2.53
US Senator	0.28%	4.29%	689	2.42
Lieutenant Governor	2.41%	4.58%	482	2.80
Attorney General	-0.06%	4.31%	502	2.71
Secretary of State	1.58%	4.36%	467	2.80
Treasurer	-0.39%	3.87%	465	2.79
Overall	0.30%	4.02%	561	2.64

2008. Comparison of the 2008 CCES with actual election results is possible for President, Senate, and Governor, as well as a handful of statewide offices. The average (across states) MSE, Root MSE, and Democratic Bias for each office are shown in Table 3. The overall relationship between Democratic Share of the Actual Vote and Democratic Share of the Survey Reported Vote is shown in the Figure.

Table 3: Survey Accuracy in 2008 CCES Sample for Vote Choice President, U. S. Senators, and Governors

Office	Avg. Standardized Error (Democratic Bias)	S.D. Standardized Error	Standardized RMSE
President	0.269	0.926	0.964
US Senator	0.003	1.256	1.256
Governor	0.320	0.816	0.876

Figure 1: Presidential Vote Accuracy Plot

2010. Comparison of the 2010 CCES with actual election results provides internal checks on the quality of the sample and responses. Specifically, we can aggregate (using the weights – V101 in the 2010 study) to the state level questions on vote for President (2010 CC317), Governor (2010 CC411), U.S. Senator (2010 CC410a and CC410b), and other statewide offices (2010 CC413a and CC413b). The difference between the Democratic Percent of the Two Party vote for each office in the sample and the actual results measures the error. That error is due to sampling and to bias. The simple difference is the Democratic party bias, the squared error is the mean squared error, and the square root of the MSE is a measure of the standard error. The average (across states) MSE, Root MSE, and Democratic Bias for each office are shown in Table 2. The overall relationship between Democratic Share of the Actual Vote and Democratic Share of the Survey Reported Vote is shown in the Figure.

The sample bias for vote choice is quite small. The average error across all offices equals -1.34%. For all offices, there is a small Republican bias. The largest bias occurs with Attorney General, where the survey understated the Democratic vote share on average 2.57%.

Table 2: Survey Accuracy in 2010 CCES Sample for U. S. Senators, Governors, and Other Statewide Offices, in states with at least 200 cases.

<i>Office</i>	<i>Avg. Error (Democratic Bias)</i>	<i>Root MSE (St. Error)</i>	<i>Average Freq. (N of Responses)</i>	<i>Expected St. Error (Avg. Sample)</i>
Governor	-0.95%	2.22%	982	1.93
US Senator	-0.50%	1.30%	882	1.98
Attorney General	-2.57%	5.04%	1082	1.84
Secretary of State	-1.80%	4.49%	859	2.00
Overall	-1.34%	3.40%	950	1.94

The square root of the Mean Squared Error is an alternative estimate of the standard error. The usual estimate assumes that the only source of error comes from random sampling. The variance of the error across surveys (in this case states) includes possible measurement error, such as that caused by question wording, and sample biases, caused by non-response or misreporting. In the Senate races, the variance across elections is smaller than expected. The standard error for the governor elections is almost exactly that predicted from the sampling formula (which is 2.2%). In Attorney General and Secretary of State races, the Square Root of the MSE is more than double the Standard Error Based on Sampling. The higher bias and mean squared error may be due to the question wording, which asks whether respondents voted for the Democrat or the Republican, rather than the name of the candidate.

Figure 4: Secretary of State Vote Accuracy Plot

III

COMMON CONTENT

This section presents variables designed for the 2010 CCES Common Content. The 2010 survey consists of six types of variables. First, sample identifiers include region, state, county, congressional district, zip code, and designated market area (DMA). Second, Profile Questions consist of background data on individual respondents collected before the fielding of the survey, and include most demographics as well as indicators of party identification and ideological orientation. Unless otherwise noted, Profile Questions were administered prior to the fielding of the Pre-Election survey. Third, Pre-Election Questions were asked in the pre-election wave in October. They are denoted CC3xx. Fourth, Post Election Questions were asked over the two weeks immediately after the election. They are denoted CC4xx. Fifth, the survey is linked to contextual information about representatives, candidates, and elections. Most of these contextual variables are contained in separate files (to conserve memory) and will be available at the CCES website.

The remainder of this guide presents the sections of the survey in the order in which the variables occur in the dataset.

Part III-A

SAMPLE IDENTIFIERS

V100 Case Identifier

V101 Common content Weight

Number of Valid Observations: 55,400

Mean: 1.000

Standard Deviation: 1.256084

Minimum: 0

Maximum: 7.029964

V201 Pre Election Survey Respondent Zip code

So that we can ask you about the news and events in your area, in what zip code do you currently reside?

Require integer value between 501 and 99999.

V206 Pre Election State Name

V276 Pre Election Congressional District Number

Note: Number of Congressional District within the state. Used along with state to uniquely identify individual CDs.

V302 Pre Election State FIPS Code

V204_post Post Election Survey Respondent Zip code

So that we can ask you about the news and events in your area, in what zip code do you currently reside?

Require integer value between 501 and 99999.

V206_post Post Election State

V276_post Post Election Congressional District Number

V302_post Post Election State FIPS Code

V278 Pre Election County Name

Note: Based on ZIP code of voter registration, if different from response in V253.

V278_post Post Election County Name

Note: Based on ZIP code of voter registration, if different from response in V253.

V277 Pre Election County FIPS Code

Note: Based on ZIP code of voter registration, if different from response in V202.

CCES 2010 Guide

V277_post Post Election County FIPS Code

Note: Based on ZIP code of voter registration, if different from response in V253.

Part III-B. PROFILE SURVEY

V203 Voter Registration Status

Are you registered to vote?

52462 <1> Yes
2587 <2> No
351 <3> Don't Know
0 <8> Skipped
0 <9> Not Asked

V204 ZIP Code Where Registered

Is [ZIP Code from V201] the zip code where you are registered to vote?

49378 <1> Yes
3087 <2> No [open integer box]
0 <8> Skipped
2935 <9> Not Asked

V205 Registered ZIP Code if different from Residence

Require integer value between 501 and 99999.

0 <999998> Skipped
52315 <999999> Not Asked

V207 Birth Year

In what year were you born?

Require integer value between 1900 and 2000.

0 <9998 > Skipped
0 <9999> Not Asked

V208 Gender

Are you male or female?

26723 <1> Male
28677 <2> Female
0 <8> Skipped
0 <9> Not Asked

V209 Employment Status

CCES 2010 Guide

Which of the following best describes your current employment status?

- 22658 <1> Working full time now
- 5545 <2> Working part time now
- 482 <3> Temporarily laid off
- 3945 <4> Unemployed
- 13237 <5> Retired
- 2962 <6> Permanently disabled
- 3254 <7> Taking care of home or family
- 1767 <8> Student
- 1550 <9> Other (Please specify) [Open]
- 0 <98> Skipped
- 0 <99> Not Asked

V211 Race

Which racial or ethnic group best describes you?

- 41388 <1> White
- 6411 <2> Black or African-American
- 4043 <3> Hispanic or Latino
- 668 <4> Asian or Asian-American
- 428 <5> Native American
- 952 <6> Mixed Race
- 1453 <7> Other (please specify) [Open]
- 57 <8> Middle Eastern
- 0 <98> Skipped
- 0 <99> Not Asked

V290 Hispanic Ethnicity

Are you of Spanish, Latino, or Hispanic origin or descent?

Note: Only asked of respondents who did not mark Hispanic or Latino for V211

- 1574 <1> Yes
- 47484 <2> No
- 143 <8> Skipped
- 6199 <9> Not Asked

V212a 3 Point Party Identification (PID)

Generally speaking, do you think of yourself as a ...?

- 19454 <1> Democrat
- 15827 <2> Republican
- 16237 <3> Independent
- 1989 <4> Other
- 1893 <5> Not sure

CCES 2010 Guide

0 <8> Skipped
0 <9> Not Asked

V212c 3 Point Party Identification - Leanners

Do you think of yourself as closer to the Democratic or Republican Party?

538 <3> Lean Democrat
1087 <4> Independent
1408 <5> Lean Republican
830 <8> Not sure
10 <88> Skipped
51517 <99> Not Asked

V212d 7 Point Party Identification (PID)

Note: Coded from branching questions asked depending on response in V212a, includes V212c

13437 <1> Strong Democrat
5895 <2> Not very strong Democrat
5097 <3> Lean Democrat
6023 <4> Independent
7805 <5> Lean Republican
4791 <6> Not very strong Republican
10930 <7> Strong Republican
1076 <8> Not sure
337 <98> Skipped
9 <99> Not Asked

V213 Education

What is the highest level of education you have completed?

1035 <1> Did not graduate from High School
10518 <2> High school graduate
15798 <3> Some college, but no degree (yet)
5074 <4> 2-year college degree
15965 <5> 4-year college degree
7010 <6> Post-graduate degree (MA, MBA, MD, JD, PhD, etc.)
0 <8> Skipped
0 <9> Not Asked

V214 Marital Status

What is your marital status?

33764 <1> Married, living with spouse
995 <2> Separated
6496 <3> Divorced

CCES 2010 Guide

2568 <4> Widowed
9189 <5> Single, never married
2366 <6> Domestic Partnership
22 <8> Skipped
0 <9> Not Asked

V215 Born Again (Pew version)

Would you describe yourself as a "born-again" or evangelical Christian, or not?

17467 <1> Yes
37896 <2> No
37 <8> Skipped
0 <9> Not Asked

V216 Importance of religion (Pew version)

How important is religion in your life?

26003 <1> Very Important
14818 <2> Somewhat Important
7646 <3> Not too important
6918 <4> Not at all important
15 <8> Skipped
0 <9> Not Asked

V217 Church attendance (Pew version)

Aside from weddings and funerals, how often do you attend religious services?

6231 <1> More than once a week
11478 <2> Once a week
5368 <3> Once or twice a month
8621 <4> A few times a year
13299 <5> Seldom
9932 <6> Never
444 <7> Don't know
27 <8> Skipped
0 <9> Not Asked

V218 Frequency of Prayer (Pew version)

People practice their religion in different ways. Outside of attending religious services, how often do you pray?

19114 <1> Several times a day
9257 <2> Once a day
8463 <3> A few times a week
1214 <4> Once a week

CCES 2010 Guide

- 3793 <5> A few times a month
- 7517 <6> Seldom
- 5031 <7> Never
- 970 <8> Don't Know
- 40 <98> Skipped
- 1 <99> Not Asked

V219 Religion (Pew version)

What is your present religion, if any?

- 25917 <1> Protestant
- 12551 <2> Roman Catholic
- 924 <3> Mormon
- 271 <4> Eastern or Greek Orthodox
- 1661 <5> Jewish
- 165 <6> Muslim
- 452 <7> Buddhist
- 87 <8> Hindu
- 2886 <10> Agnostic
- 7693 <11> Nothing in particular
- 2751 <12> Something else
- 42 <98> Skipped
- 0 <99> Not Asked

V220 Protestant Church

To which Protestant church or group do you belong?

- 6794 <1> Baptist
- 3514 <2> Methodist
- 4724 <3> Nondenominational or Independent Church
- 2588 <4> Lutheran
- 1841 <5> Presbyterian
- 1326 <6> Pentecostal
- 1396 <7> Episcopalian
- 869 <8> Church of Christ or Disciples of Christ
- 664 <9> Congregational or United Church of Christ
- 213 <10> Holiness
- 192 <11> Reformed
- 241 <12> Adventist
- 178 <13> Jehovah's Witness
- 1629 <90> Something else
- 15 <98> Skipped
- 29216 <99> Not Asked

V222 Baptist Church

CCES 2010 Guide

To which Baptist church do you belong, if any?

- 2935 <1> Southern Baptist Convention
- 506 <2> American Baptist Churches in USA
- 268 <3> National Baptist Convention
- 65 <4> Progressive Baptist Convention
- 932 <5> Independent Baptist
- 140 <6> Baptist General Conference
- 364 <7> Baptist Missionary Association
- 88 <8> Conservative Baptist Association of America
- 291 <9> Free Will Baptist
- 404 <10> General Association of Regular Baptists
- 803 <90> Other Baptist
- 88 <98> Skipped
- 48516 <99> Not Asked

V223 Methodist Church

To which Methodist church do you belong, if any?

- 3106 <1> United Methodist Church
- 85 <2> Free Methodist Church
- 146 <3> African Methodist Episcopal
- 31 <4> African Methodist Episcopal Zion
- 52 <5> Christian Methodist Episcopal Church
- 114 <90> Other Methodist Church
- 21 <98> Skipped
- 51845 <99> Not Asked

V224 Nondenominational or Independent Church

To which kind of nondenominational or independent church do you belong, if any?

- 1581 <1> Nondenominational evangelical
- 341 <2> Nondenominational fundamentalist
- 527 <3> Nondenominational charismatic
- 391 <4> Interdenominational
- 1278 <5> Community church
- 767 <90> Other
- 18 <98> Skipped
- 50497 <99> Not Asked

V225 Lutheran Church

To which Lutheran church do you belong?

- 1203 <1> Evangelical Lutheran Church in American (ELCA)
- 928 <2> Lutheran Church, Missouri Synod

CCES 2010 Guide

167 <3> Lutheran Church, Wisconsin Synod
311 <4> Other Lutheran Church
13 <8> Skipped
52778 <9> Not Asked

V226 Presbyterian Church

To which Presbyterian church do you belong?

1090 <1> Presbyterian Church USA
344 <2> Presbyterian Church in America
31 <3> Associate Reformed Presbyterian
28 <4> Cumberland Presbyterian Church
43 <5> Orthodox Presbyterian
77 <6> Evangelical Presbyterian Church
247 <90> Other Presbyterian Church
22 <98> Skipped
53518 <99> Not Asked

V227 Pentecostal Church

To which Pentecostal church do you belong?

464 <1> Assemblies of God
77 <2> Church of God Cleveland TN
50 <3> Four Square Gospel
109 <4> Pentecostal Church of God
89 <5> Pentecostal Holiness Church
127 <6> Church of God in Christ
24 <7> Church of God of the Apostolic Faith
19 <8> Assembly of Christian Churches
69 <9> Apostolic Christian
350 <90> Other Pentecostal Church
7 <98> Skipped
54015 <99> Not Asked

V228 Episcopal Church

To which Episcopalian church do you belong?

1150 <1> Episcopal Church in the USA
168 <2> Anglican Church (Church of England)
16 <3> Anglican Orthodox Church
26 <4> Reformed Episcopal Church
48 <90> Other Episcopalian or Anglican Church
0 <98> Skipped
53992 <99> Not Asked

V229 Christian Church

To which Christian church do you belong?

589 <1> Church of Christ
184 <2> Disciples of Christ
102 <3> Christian Churches and Churches of Christ
37 <90> Other Christian church
0 <98> Skipped
54488 <99> Not Asked

V230 Congregational Church

To which congregational church do you belong?

532 <1> United Church of Christ
55 <2> Conservative Congregational Christian
39 <3> National Association of Congregational Christians
69 <90> Other Congregational
2 <98> Skipped
54703 <99> Not Asked

V231 Holiness Church

To which Holiness church do you belong?

32 <1> Church of the Nazarene
6 <2> Wesleyan Church
2 <3> Free Methodist Church
5 <4> Christian and Missionary Alliance
25 <5> Church of God (Anderson, Indiana)
3 <6> Salvation Army, American Rescue workers
151 <90> Other Holiness
0 <98> Skipped
55176 <99> Not Asked

V232 Reformed Church

To which Reformed church do you belong?

73 <1> Reformed Church in American
70 <2> Christian Reformed Church
65 <90> Other Reformed
3 <98> Skipped
55189 <99> Not Asked

V233 Adventist Church

To which Adventist church do you belong?

229 <1> Seventh Day Adventist

CCES 2010 Guide

2 <2> Church of God, General Conference
3 <3> Advent Christian
10 <90> Other Adventist
0 <98> Skipped
55256 <99> Not Asked

V234 Catholic Church

To which Catholic church do you belong?

12002 <1> Roman Catholic Church
47 <2> National Polish Catholic Church
29 <3> Greek-rite Catholic
112 <4> Armenian Catholic
236 <5> Old Catholic
235 <90> Other Catholic
11 <98> Skipped
42738 <99> Not Asked

V235 Mormon Church

To which Mormon church do you belong?

906 <1> The Church of Jesus Christ of Latter-day Saints
17 <2> Community of Christ
13 <90> Other Mormon
0 <98> Skipped
54464 <99> Not Asked

V236 Orthodox Church

To which Orthodox church to you belong?

129 <1> Greek Orthodox
44 <2> Russian Orthodox
26 <3> Orthodox Church in America
14 <4> Armenian Orthodox
24 <5> Eastern Orthodox
15 <6> Serbian Orthodox
29 <90> Other Orthodox
1 <98> Skipped
55118 <99> Not Asked

V237 Jewish Group

To which Jewish group do you belong?

821 <1> Reform
507 <2> Conservative

CCES 2010 Guide

124 <3> Orthodox
50 <4> Reconstructionist
173 <90> Other
1 <98> Skipped
53724 <99> Not Asked

V238 Muslim Group

To which Muslim group do you belong?

103 <1> Sunni
13 <2> Shia
26 <3> Nation of Islam (Black Muslim)
29 <90> Other Muslim
0 <98> Skipped
55229 <99> Not Asked

V239 Buddhist group

To which Buddhist group do you belong?

39 <1> Theravada (Vipassana) Buddhism
180 <2> Mahayana (Zen) Buddhism
112 <3> Vairayana (Tibetan) Buddhism
110 <90> Other Buddhist
3 <98> Skipped
54926 <99> Not Asked

V240 Hindu Group

With which of the following Hindu groups, if any, do you identify with most closely?

40 <1> Vaishnava Hinduism
14 <2> Shaivite Hinduism
9 <3> Shaktism Hinduism
22 <90> Other Hinduism
3 <98> Skipped
55312 <99> Not Asked

V242 Have children under 18

Are you the parent or guardian of any children under the age of 18?

13123 <1> Yes
42169 <2> No
108 <8> Skipped
0 <9> Not Asked

V241 Number of children under 18

- 6777 <9> Not Asked

CC320 Gun Control

In general, do you feel that the laws covering the sale of firearms should be made more strict, less strict, or kept as they are?

- 23044 <1> More Strict
- 10491 <2> Less Strict
- 21807 <3> Kept As They Are
- 58 <8> Skipped
- 0 <9> Not Asked

CC321 Climate Change

From what you know about global climate change or global warming, which one of the following statements comes closest to your opinion?

- 15409 <1> Global climate change has been established as a serious problem, and immediate action is necessary.
- 13853 <2> There is enough evidence that climate change is taking place and some action should be taken.
- 10730 <3> We don't know enough about global climate change, and more research is necessary before taking any actions.
- 11095 <4> Concern about global climate change is exaggerated. No action is necessary.
- 4201 <5> Global climate change is not occurring; this is not a real issue.
- 112 <8> Skipped

CCES 2010 Guide

0 <9> Not Asked

CC322 Immigration

What do you think the U.S. government should do about immigration? Select all that apply.

1684 <1> Fine Businesses

22162 <1> Grant legal status to all illegal immigrants who have held jobs and paid taxes for at least 3 years, and not been convicted of any felony crimes.

645 <1> Increase the number of guest workers allowed to come legally to the US.

33861 <1> Increase the number of border patrols on the US-Mexican border.

25999 <1> Allow police to question anyone they think may be in the country illegally.

3998 <1> None of these.

CC324 Abortion

Which one of the opinions on this page best agrees with your view on abortion?

6623 <1> By law, abortion should never be permitted

15641 <2> The law should permit abortion only in case of rape, incest, or when the woman's life is in danger

8135 <3> The law should permit abortion for reasons other than rape, incest, or danger to the woman's life, but only after the need for the abortion has been clearly established

24639 <4> By law, a woman should always be able to obtain an abortion as a matter of personal choice

CC415r Taxes vs. Spending

If your state were to have a budget deficit this year it would have to raise taxes on income or sales or cut spending, such as on education, health care, welfare, and road construction. What would you prefer more, raising taxes or cutting spending? Choose a point along the scale from 100% tax increases (and no spending cuts) to 100% spending cuts (and no tax increases). The point in the middle means that the budget should be balanced with equal amounts of spending cuts and tax increases. If you are not sure, or don't know, please check the box below

Values in range 0 to 100

0 = All from tax increases
100 = All from spending cuts
280 <998> Skipped
0 <999> Not Asked

CC416r Income vs. Sales

If the state had to raise taxes, what share of the tax increase should come from increased income taxes and what share from increased sales taxes? Choose a point along the scale from 100% from sales (and none from income) to 100% from income (and none from sales). The point in the middle means that any increase in taxes should come equally from sales and income taxes. If you are not sure, or don't know, please check the box below

Values in range 0 to 100

0 = All from sales taxes
100 = All from income taxes

[Prompt for CC422] Do you agree or disagree with the following statements?

CC422a Racial Resentment A

The Irish, Italians, Jews and many other minorities overcame prejudice and worked their way up. Black should do the same without any special favors.

20721 <1> Strongly agree
9432 <2> Somewhat agree
7501 <3> Neither agree nor disagree
5210 <4> Somewhat disagree
3717 <5> Strongly disagree
103 <8> Skipped
0 <9> Not Asked

CC422b Racial Resentment B

Generations of slavery and discrimination have created conditions that make it difficult for Blacks to work their way out of the lower class.

Part III-F

VOTE VALIDATION VARIABLES

Voter turnout and registration survey responses have been validated for the 2010 CCES. Catalist, a DC-based political data vendor, performed the matching procedure using records from its national voter file. Catalist collects regularly-updated voter registration records from every state and also collects commercial records from data aggregators in order to identify non-registrants. This document explains the variables included in the public CCES validated file. For more detailed accounting of Catalist data, consult Ansolabehere and Hersh 2010, and Hersh 2010.²

voter_status Validated Registration Status

The voter status designation differentiates “active” registered voters from “inactive” registered voters, as listed in the state voter registration file. “Dropped” respondents are those who had been on a registration list in an earlier Catalist acquisition of registration records from a state but have since been removed from the state file. “Unregistered” respondents are those for whom Catalist has identified an individual through commercial records but the person has no record of being registered to vote. “multipleAppearances” respondents are those who are registered in one state, filed a change of address form with the U.S. Post Office indicating a move to a new state, but have not registered in the new state. Finally, “NoVoterFileMatch” respondents are individuals who could not be identified with any commercial or registration record. With all appropriate caveats for data quality, these voters may be presumed to be unregistered.

41109 <active>
1316 <dropped>
754 <inactive>
258 <multipleAppearances>
9457 <NoVoterFileMatch>
2506 <unregistered>

vote_gen10 Validated Vote - 2010 General

This variable indicates validated voters in the 2010 general election. Respondents with a vote history record that indicates that they voted in this election are put into category 1. Those for whom a validated registration record indicates that they are unregistered to vote are into category 2. Respondents who said that they are not citizens (category 2 in question V263) are put into category 3. Respondents who said that they are not registered to vote (category 2 in question V203) are put into category 4. Those who said they did not vote in the 2010 general election (categories 1 through 4 in question CC401) are put into category 5. Cases for which a validated registration record was found, but which lacked a validated vote history record are placed into category 6. The logic of this category is that if a registration record was

² Stephen Ansolabehere and Eitan Hersh, “The Quality of Voter Registration Records: A State-by-State Analysis,” Caltech/MIT Voting Technology Project Working Paper, 2010; Eitan Hersh “At the Mercy of Data: Campaigns’ Reliance on Available Information in Mobilizing Supporters,” Working Paper, 2010.

found for an individual, we should have also identified a vote history record as well. Because no vote history record was identified, these individuals are be registered voters who did not participate in the election. For a more detailed consideration of each of these categories, see below.

The cases which do not fit into any of those six categories are placed into category 7, which should be treated as missing data. After all the cases were classified, all respondents from Virginia were categorized into group 8, since Virginia state law restricts use of vote history data. This category should be treated as missing data as well.

When collapsing this variable to a dummy variable of "voted/did not vote" it is important to explore different strategies of treating categories 2 through 6 as either non-voters or missing. For example, 100% of verified unregistered individuals did not vote in the 2010 general election, so treating category 2 of `vote_gen10` as non-voters is a safe decision.

Seven individuals however (1.29% of the overall sample) who claimed to be non-citizens in V263 were found to have validated voting records, and thus are in category 1 of `vote_gen10`. Likewise, 67 respondents (2.59%) of voters who claimed to not be registered to vote in V203 were found to have a record of voting in the 2010 general election. Of these 67 respondents, 66 were validated as active voters and 1 was validated as having been dropped from the voter registration list.

Among those who said they did not vote in the 2010 general election (CC401), 151 had validated voting records (2.11%). Among those who claimed to have voted, only 76.67% had validated voting records. It is also important to treat those in category 7 as missing data, rather than non-voters. Of those respondents, 5475 of them (97.96%) said that they are registered voters (V203) and 3966 (70.96%) claim to have voted in the 2010 general election (CC401).

33854 <1> Validated as voting
2453 <2> Did not vote - validated record of being unregistered
376 <3> Did not vote - non-citizen
1350 <4> Did not vote - said they are not registered
6112 <5> Did not vote - said they did not vote
4335 <6> Did not vote - has a verified registration record but no vote history record
5589 <7> No evidence on whether the respondent voted or not
1331 <8> Virginia

vote_pri10 Validated Vote - 2010 Primary

This variable indicates validated voters in the 2010 general election. Respondents with a vote history record that indicates that they voted in this election are put into category 1. Those for whom a validated registration record indicates that they are unregistered to vote are into category 2. Respondents who said that they are not citizens (category 2 in question V263) are put into category 3. Respondents who said that they are not registered to vote (category 2 in question V203) are put into category 4. Those who said they did not vote in the 2010 general election (category 0 in questions CC352a and CC352b) are put into category 5. Cases for which a validated registration record was found, but which lacked a validated vote history record are placed into category 6. The logic of this category is that if a registration record was found for an individual, we should have also identified a vote history record as well. Because no vote history record was identified, these individuals are be registered voters who did not participate in the

CCES 2010 Guide

election. For a more detailed consideration of each of these categories, see the above discussion of the `vote_gen10` variable.

The cases which do not fit into any of those six categories are placed into category 7, which should be treated as missing data. After all the cases were classified, all respondents from Virginia were categorized into group 8, since Virginia state law restricts use of vote history data. This category should be treated as missing data as well.

22204 <1> Validated as voting
2453 <2> Did not vote - validated record of being unregistered
378 <3> Did not vote - non-citizen
1394 <4> Did not vote - said they are not registered
14928 <5> Did not vote - said they did not vote
8201 <6> Did not vote - has a verified registration record but no vote history record
4511 <7> No evidence on whether the respondent voted or not
1331 <8> Virginia

Part IV

CONTEXTUAL VARIABLES

Contextual variables consist of the names and parties of the candidates for U. S. House, U. S. Senate, and Governor. For all offices, Candidate 1 is the Democrat and Candidate 2 is the Republican, except when no Democrat is running. When no Democrat is running, the Republican is listed as Candidate 1. When only one candidate is running, Candidate 2 is listed as 'NA'.

In addition, there are separate files containing election results and actual roll call votes cast. These are available at the CCES Website, and can be merged in with the Common Content dataset.

Senate

Sitting Senators (The full name for seat one is found in V513; seat two V521)
